ÖVSV Dachverband

DRAWS™ Digital Radio Amateur Workstation

DRAWS™ ist ein Hat für den Raspberry Pi 3 Packet und bietet:

(<http://nwdigitalradio.com/>)

APRS

Getting crowded on 2m/1200?

Move up to 70cm/9600 and breathe again.

Take the UDR mobile as the ultimate tracker by adding a GPS. Or set it up as an IGate in your shack.

(<http://nwdigitalradio.com/>)

Winlink

Afraid to send an attachment?

Move up to 70cm/9600 and increase your thru-put 8X.

The UDR works as a peer or can be configured as an RMS Gateway. Use your favorite email client on any Windows, Mac, Linux, Android or iOS device.

(<http://nwdigitalradio.com/>)

D-STAR

Want to increase your coverage?

Add a gateway to your repeater for about the price of a dual-band mobile. Use D-RATS for EMCOMM.

(<http://nwdigitalradio.com/>)

Experimenter

Thinking of a better way?

This open-source platform is ready for your experiments using the Raspberry Pi 2 or 3

Mehr dazu in diesem Blogbeitrag (<http://nwdigitalradio.com/what-is-draws/>) eines der Entwickler und in dieser Broschüre (<https://nw-digital-radio.groups.io/g/udrc/files/DRAWSBrochure.pdf>).
